Bengaluru,

PROFESSIONAL SUMMARY

Results-oriented Java Backend Developer with 3.6+ years of experience building scalable backend applications using Java, Spring Boot, Microservices, REST APIs, Hibernate/JPA, MongoDB, and MySQL. Strong expertise in object-oriented programming, multithreading, debugging, and performance optimization. Experienced in designing secure, maintainable, and scalable enterprise applications while collaborating with Agile teams. Passionate about writing clean, reusable code and delivering high-quality software solutions.

KEY SKILLS

Java | Core Java | Spring Boot | Spring MVC | Hibernate/JPA | Microservices | REST APIs | Spring Security | JWT | OAuth2 | MongoDB | MySQL | SQL | Multithreading | Design Patterns | Maven | Git | GitHub | Docker | Jenkins | Linux/Unix | JUnit | Postman | Agile Scrum | JIRA | JSP Servlet.

TECHNICAL SKILLS

- Backend: Java, Java 8, Java 11, J2EE, Spring Boot, Spring MVC, Hibernate/JPA, Multithreading, JSP / Servlets, Collections Framework, Exception Handling, Java Streams, Lambda Expressions
- Databases: MongoDB, MySQL, SQL
- Security: JWT, OAuth2, Spring Security
- DevOps: Jenkins, Docker
- Tools: Git, GitHub, Maven, Postman, IntelliJ, Eclipse, JIRA

WORK EXPERIENCE

ANTS IT SOLUTIONS PRIVATE LIMITED

JUL 2024 - PRESENT

SOFTWARE ENGINEER

- Designed and developed scalable RESTful APIs using Java, Spring Boot, Hibernate/JPA, MongoDB, and MySQL for pharmaceutical business applications.
- Developed and enhanced Microservices-based backend services with reusable components following object-oriented design principles and design patterns.
- Implemented Spring Security, JWT, OAuth2 authentication, API validation, global exception handling, pagination, and sorting to build secure and reliable applications.
- Optimized MongoDB queries and backend logic, improving API performance while investigating and resolving production issues through debugging and log analysis.
- Applied Core Java concepts including Collections and Multithreading to develop efficient, high-performance backend services.
- Developed unit tests using JUnit, participated in peer code reviews, and maintained high code quality following software engineering best practices.
- Managed Maven build automation and supported application deployments in Linux/Unix environments while collaborating with DevOps teams.
- Collaborated with cross-functional Agile teams throughout requirement analysis, development, testing, deployment, and production support.

HEALTH SIGNZ TECHNOLOGIES PRIVATE LIMITED

JUL 2022 - FEB 2024

SOFTWARE ENGINEER

- Developed and maintained backend applications using Java, Spring Boot, MongoDB and MySQL.
- Developed scalable backend modules for Doctor Booking, Video Consultation, Inventory Management and Medical Reports.
- Worked on Microservices architecture and integrated backend services.
- Designed efficient MongoDB aggregation pipelines to solve complex reporting requirements and improve query performance.
- Implemented Spring Security and JWT authentication for secure application access.
- Investigated production issues, analyzed root causes and delivered timely fixes to ensure application stability.

PROJECT 1

INTEGRATED PATIENT WELLNESS & APPOINTMENT MANAGEMENT PLATFORM

ISHA REJUVENATION & OLIVA SKIN CARE

Environment : Java 8, Spring Boot, Microservices, MongoDB, JWT, JUnit

Responsibilities:

- Developed appointment scheduling and patient management APIs.
- Built wellness package and treatment tracking modules.
- Implemented authentication and authorization.
- Developed reporting and notification services.
- Created MongoDB aggregation pipelines.
- Developed scalable backend services by optimizing MongoDB queries and backend logic, improving API performance.
- Participated in code reviews and testing activities.
- Built reusable backend components that reduced duplicate code and improved maintainability.
- Participated in requirement analysis and sprint planning.
- Performed API testing and validation using Postman.

PROJECT 2

PHARMACEUTICAL SUPPLY CHAIN & INVENTORY MANAGEMENT PLATFORM

VENUS REMEDIES

Environment : Java 11, Spring Boot, Microservices, MongoDB, OAuth2, MySQL, Docker, Jenkins

Responsibilities:

- Developed APIs for inventory and procurement management.
- Enhanced existing microservices based on business requirements.
- Implemented OAuth2 security controls.
- Solved backend performance challenges by optimizing MongoDB queries and application logic, improving API response times.
- Participated in CI/CD and deployment support activities.
- Designed reusable and scalable backend services to support future business enhancements.
- Participated in sprint planning, estimation and technical discussions.
- Performed API testing and validation using Postman.

CERTIFICATIONS

- Java Full Stack Development
- AWS & DevOps Certification

ACHIEVEMENTS

- Successfully developed and delivered 20+ REST APIs for Healthcare and Pharmaceutical applications.
- Improved API performance through MongoDB query optimization and backend code enhancements.
- Contributed to scalable Microservices-based applications supporting multiple business modules.
- Built reusable backend components that improved code maintainability and reduced development effort.
- Consistently delivered sprint commitments while maintaining high code quality in Agile Scrum environments.

EDUCATION

BACHELOR OF ENGINEERING (MECHANICAL ENGINEERING)

East West Institute of Technology, VTU

CGPA: 6.8 | 2021

DIPLOMA (MECHANICAL ENGINEERING)

M.E.I Polytechnic

Percentage: 70% | 2018

LANGUAGES

English, Kannada, Telugu, Hindi, Tamil
